One Hell of a Casino

Production document · priorities for programmers

MATTEO MARRALE
PRODUCER
DIGITAL BROS GAME ACADEMY

Development priority list

1. Build the mini-games' core functionality to get the basic skeleton, with placeholder assets, in order of importance:
   – fiche slider
   – hell platform
   – greed towers
2. Build the lobby connecting to the mini-games and to all the other game windows, with all buttons working, again with placeholder assets, in order of priority:
   – buttons to go to each mini-game
   – button to open the gacha and slot system
   – button to open the drop-down menu at the top right, and make the buttons inside it work (the shop, the leaderboard and the settings)
   – a settings menu where you can lower and raise the volume
   – buttons to open the tutorials in the various levels
3. Build the shop:
   – two shop windows, each selling a different currency, with the option to switch from one window to the other
   – the system for buying resources, with the resource counter going up accordingly (buy 5 tokens, the counter must go up by 5)
4. Build the gacha and slot machine system, specifically in this order:
   – the random pull logic
   – the buttons (pull button and lever) that trigger the pull
   – the slot and the gacha work only if you spend a set amount of currency
   – the currency counter, and switching from the slot to the gacha through the counter
   – the button that opens the pull rate info window
   – the button that opens the shop
5. Add the social features, in order:
   – the leaderboard showing the top 10 players in your current league
   – the window that opens the link to social accounts
   – the score ranking of friends connected through social accounts
6. Finalize the UI and make sure every button opens its matching menu

NO.	STATUS	ISSUE/FEEDBACK	SUGGESTED FIX	SOLUTION USED
1	Done	The tutorial canvas doesn't cover the whole background	widen the GIFs, add an outline to the buttons	
2	Done	The UI lacks feedback: especially when buying or equipping items, the player isn't told whether the action went through	"Equip" button that greys out and/or changes its label to "equipped"	Confirm or reject sound for buttons
3	Done	The spin cost is missing in the slot	Put the value under the coin sprite	
4	Done	Fix the ads: they must be "black background with ADV in white"		
5	Blocked	The chips in the mainMenu scene could change skin based on the one equipped in the mini-games.		
6	Done	In Dice Madness it would be nice to replace the green plane with a slightly more detailed texture, even just a "felt" texture		
7	Done	Replace the names in the leaderboard with fictional ones (Takanaka69, GastaniFrinzi46, etc.)		
9	Done	Fire diorama, to make it look "animated"		
10	Done	Give the mini-games their names instead of the label "minigame"	please	
11	Done	The leaderboard order makes no sense: why does the player at the bottom have more points than the first?		
12	Done	The shop is missing the other 2 currencies on screen
